

Screenshot walkthrough

Madison Action Layer v2: how the AI makes decisions, what it produces, how it fails safely and how far it scales. All screenshots from real runs on 2026-10-09.

- 1

The workflow: four agents in one n8n canvas
- 2

Intelligence: Claude's routing decision
- 3

Never trust the AI blindly: the validator
- 4

Failing safely: Claude unreachable, work still routed
- 5

...and the team is told the AI was skipped
- 6

Output: an alert a busy marketer can act on
- 7

Action: tasks land in the CRM
- 8

Visibility: the shared decision log
- 9

Scale: 400 requests, 100 at a time
- 10

Reliability: duplicates are not re-processed

How to present this demo

Key points (in order)

1. **Problem (20 s):** Madison's AI content dead-ends in a CSV; teams copy it into CRMs by hand — ~10 h/week per marketer.
2. **Architecture (40 s):** Gatekeeper (no AI) → Claude Routing Agent → Execution Agent; Insights Agent on a schedule. Screenshot 1.
3. **Intelligence (60 s):** Claude scores channel fit against real limits, flags risks with exact evidence, decides, writes the task and a fix. Schema + validator = never trusted blindly. Screenshots 2–3.
4. **Real outputs (60 s):** Slack alert, HubSpot task, Sheet log, emailed report with AI-found patterns. Screenshots 4–6 + gallery.
5. **Scale + honesty (45 s):** 834 real requests, 0 failures, ≈ 330 /min ceiling on 1 vCPU, \$0.0045/event; known gap: concurrent duplicates. Screenshots 7–8.
6. **Value (15 s):** \$0.16 of AI replaced ≈ 3.5 h of handoff per 50 variants.

Backup plan if the live demo fails

- **Webhook / n8n down:** present this PDF; every screenshot is from a real run on 2026-10-09.
- **Claude slow or rate-limited:** show the fallback branch — the event still routes to #campaign-review with a "⚠️ AI router unavailable" message.
- **Slack/HubSpot error:** open the Google Sheet / Data Table — every outcome is logged, including partial failures.
- **No internet:** open outputs/madison_run_report.html and scale_test/results/*.json locally.
- **Live-demo command (1 event, ~7 s):**

```
python3 make_events.py --n 1 --run-id live-demo &&  
python3 loadtest.py events_live-demo.jsonl
```

The workflow: four agents in one n8n canvas

One webhook in, real actions out. Each event only runs the branch it needs — blocked, duplicate and fallback branches stay grey.

① Gatekeeper (no AI): schema, date and Popper checks + idempotency lookup.

③ Execution Agent: HubSpot task → Slack alert → log → answer Madison.

② Routing Agent: Claude Haiku 4.5 with a strict JSON schema, then a validator.

④ Insights Agent: daily/on-demand batch report → email, Slack, Sheet, HTML.

Intelligence: Claude's routing decision

The Routing Agent receives the variant, the campaign context and market context, and must answer in a fixed schema.

The screenshot displays the Routing Agent interface (Claude Haiku 4.5) with four numbered callouts highlighting key components:

- System Prompt:** Located in the INPUT section, it defines the agent's role as a routing agent in Madison's Action Layer, responsible for deciding what happens to each variant before it reaches the team's CRM and chat. It includes rules for channel fit (score 1-5) and character limits for Google Ads and Facebook.
- JSON Schema:** Located in the INPUT section, it defines the output schema with required fields: decision, priority, owner_team, slack_channel, channel_fit, risk_flags, rationale, suggested_fix, hubspot_task, slack_message, and confidence. It also includes an enum for decision with values: auto_approve, needs_review, and block.
- Output:** Located in the OUTPUT section, it shows the JSON response from the agent, including fields like model, id, type, role, content, and usage. The content field contains a detailed decision rationale and suggested fixes.
- Usage:** Located in the OUTPUT section, it shows the usage statistics: input_tokens: 2199, cache_creation_input_tokens: 0, cache_read_input_tokens: 0, ephemeral_5m_input_tokens: 0, ephemeral_1h_input_tokens: 0, and output_tokens: 474.

- System prompt: channel limits, severity calibration, decision + priority rules.
- JSON schema with enums — the answer is machine-checkable, not free text.
- Decision: needs_review, owner, channel fit 4/5, two risk flags with evidence, a rewrite.
- Real usage: 2,199 input + 474 output tokens.

Never trust the AI blindly: the validator

Every answer is checked before anything is sent. Refusals, truncation, bad JSON or invalid values go to a rule-based fallback.

The screenshot displays the 'Validate AI Decision' interface, which is divided into several sections: INPUT, PARAMETERS, SETTINGS, and OUTPUT. The interface is designed to validate AI-generated content before it is sent.

INPUT Section: Shows the details of the input message, including the model (Claude Haiku 4.5), ID, type (message), role (assistant), and content. The content is a JSON object with a 'text' field containing a message about 'Discover Harem Pants'.

PARAMETERS Section: Contains a 'Mode' dropdown set to 'Run Once for All Items' and a 'Language' dropdown set to 'JavaScript'. Below these is a 'JavaScript' code editor with the following code:

```
1 // 2. ROUTING AGENT - answer checker. Never trusts the AI
2 // blindly:
3 // API errors (rate limit / timeout / 5xx after 3 retries),
4 // refusals, truncated or malformed JSON and
5 // out-of-range values all mark the decision invalid so the
6 // rule-based fallback takes over.
7 const res = $input.first().json;
8 const started = $('Build Claude
9 Request').first().json.ai_started_at_ms;
10 const PRICE_IN = 1.0 / 1e6, PRICE_OUT = 5.0 / 1e6; // Claude
11 Haiku 4.5: $1 / $5 per million tokens
12
13 const ENUMS = {
14   decision: ['auto_approve', 'needs_review', 'block'],
15   priority: ['urgent', 'high', 'normal', 'low'],
16   owner_team: ['Paid Media', 'Lifecycle & Email', 'Social &
17 Influencer', 'Content & SEO', 'Brand & Legal Review'],
18   slack_channel: ['campaign-urgent', 'campaign-review',
19 'campaign-digest'],
20 };
21

Failing safely: Claude unreachable, work still routed

Live test fallback-1: model ID set to an invalid value. The path bends through the fallback router instead of stopping.

- 1** Routing Agent errors (⚠) after 3 retries — but continues.
- 3** Rule-based Fallback Router: regex risks + team by channel.

- 2** Validator answers false → branch to fallback.
- 4** Plan Actions continues: task + Slack alert still sent.

...and the team is told the AI was skipped

The fallback alert in #campaign-review — a human checks it; nothing is lost.

The screenshot shows a Slack interface for a workspace named 'Madison Project'. The left sidebar contains navigation options like Home, DMs, Activity, Files, Channels, Agents & Tools, and Admin. The main area displays the '# campaign-review' channel. A message from 'Madison Bot' is visible, containing a HubSpot task. The message is highlighted with an orange box. The message content includes a risk flag, suggested fix, and a HubSpot task. The task is titled 'Discover Harem Pants!' and includes a channel fit section. The channel fit section shows '3/5 — Not assessed (AI unavailable)'. The message is also highlighted with an orange box. The message content includes a risk flag, suggested fix, and a HubSpot task. The task is titled 'Discover Harem Pants!' and includes a channel fit section. The channel fit section shows '3/5 — Not assessed (AI unavailable)'. The message is also highlighted with an orange box.

Message # campaign-review

Knit Sweater! body is 89 characters (acceptable); copy uses casual tone with emoji-like language

Risk flags

- unverifiable claim (medium): "Unbeatable comfort" is a comparative superlative without substantiation; typically flagged as unproven marketing claim in Google Ads policy.
- channel mismatch (medium): "Google Ads search copy should be direct and benefit-focused; 'snuggle up' is colloquial and the CTA tone doesn't match Google Ads conventions for this demographic (Men 18-24 · Foodies)."

Suggested fix

Headline: 'Chunky Knit Sweater - Cozy & Warm' (34 chars, trim to 30). Body: 'Thick, textured knit perfect for layering. Premium comfort and timeless style.' CTA: 'Shop now.'

HubSpot task #405887122139 · Routed by Claude Haiku 4.5 · confidence 0.72 · evt_v2-50_0042

Madison Bot APP · 07:49

NORMAL · Needs review

AD-0001 (Harem Pants, Facebook): Strong copy & fit, but audience/brief mismatch—tech enthusiasts targeting needs fashion-to-tech hook or audience clarification. Review team to advise.

Campaign	Owner
TechCorp · Social Media on Facebook	Social & Influencer

Headline

Discover Harem Pants!

Channel fit

4/5 — Strong hook in first 40 characters ('Discover Harem Pants!'), body reads well when truncated at 125 chars. Fits Facebook

Risk flags

- false urgency (low): "Limited stock - shop now!" creates urgency without clear stock verification.
- brief mismatch (medium): "Campaign targets 'Tech Enthusiasts' but variant copy is purely fashion/lifestyle-focused with no tech angle or relevance to the TechCorp account context."

Suggested fix

Reframe the hook to connect fashion to tech lifestyle: 'Harem Pants for the Modern Tech Life' or confirm the audience segment should be general fashion buyers, not tech enthusiasts. Keep the body copy as-is.

HubSpot task #405859715793 · Routed by Claude Haiku 4.5 · confidence 0.72 · evt_demo-1_0001

Madison Bot APP · 08:49

NORMAL · Needs review

AI router unavailable (api_error: The resource you are requesting could not be found). "Discover Harem Pants!" for TechCorp needs a manual check.

Campaign	Owner
TechCorp · Social Media on Facebook	Social & Influencer

Headline

Discover Harem Pants!

Channel fit

3/5 — Not assessed (AI unavailable).

Risk flags

- false urgency (low): "Limited stock"

Suggested fix

Review — human review required.

Spot task #405971552959 · Routed by fallback rules · confidence 0 · evt_fallback-1_0001

1 ⚠️ AI router unavailable — with the real API error.

2 Channel fit: not assessed (AI unavailable).

3 HubSpot task created · 'Routed by fallback rules' · confidence 0.

Output: an alert a busy marketer can act on

Slack Block Kit message in #campaign-review — decision, owner, channel fit, evidence and the fix, linked to the HubSpot task.

The screenshot shows a Slack interface with a sidebar on the left containing navigation options like Home, DMs, Activity, Files, Agents & tools, and Admin. The main channel is #campaign-review. A message from a bot (Claude Haiku 4.5) is displayed, detailing a HubSpot task review. The message is structured with a decision, owner, channel fit, risk flags, and a suggested fix. Four numbered callouts highlight specific parts of the message:

- 1** Risk flags: "Unbeatable comfort" is a comparative superlative without substantiation; typically flagged as unproven marketing claim in Google Ads policy.
- 2** Suggested fix: "Chunky Knit Sweater - Cozy & Warm" (34 chars, trim to 30). Body: "Thick, textured knit perfect for layering. Premium comfort and timeless style!" CTA: "Shop now!"
- 3** Channel fit 2/5 with the reason (53 chars vs 30).
- 4** HubSpot task ID + 'Routed by Claude Haiku 4.5' + confidence.

1 Risk flags quote the copy ('Unbeatable comfort').

3 Channel fit 2/5 with the reason (53 chars vs 30).

2 Suggested fix: a headline that fits the 30-char Google Ads limit.

4 HubSpot task ID + 'Routed by Claude Haiku 4.5' + confidence.

Action: tasks land in the CRM

Each routed variant becomes a HubSpot task with an imperative title, priority and due date (urgent = today).

The screenshot shows the HubSpot Tasks interface. The left sidebar contains navigation links for Home, Contacts, Companies, Deals, Tasks, Sales, Activity Feed, Prospecting Agent, Sales Workspace, Platform, and Dashboards. The main area displays a list of tasks with columns for Task Title, Task stage, Task → Contacts, Task → Companies, Last contacted, Last engagement, Task Type, and Due date (EDT). Three orange boxes highlight specific columns: 1. Task Title, 2. Task stage, and 3. Due date (EDT).

Task Title	Task stage	Task → Contacts	Task → Companies	Last contacted	Last engagement	Task Type	Due date (EDT)

1 Decision mix: auto_approve / needs_review / block.

2 Routed by Claude (ai) or skipped by the Gatekeeper.

3 HubSpot task ID — traceable to the CRM.

4 Latency and cost per decision.

Scale: 400 requests, 100 at a time

Real HTTP load against the production webhook on a 1 vCPU VPS. Full results: [scale_test_results.md](#).

```
mayank@Mayanks-MacBook-Air Assignment_4 % cat scale_test/results/v2-400.json
{
  "label": "v2-400",
  "requests": 400,
  "concurrency": 100,
  "wall_clock_s": 71.8,

  "ai_cost_per_routed_event_usd": 0.00448,
  "sample_errors": []
}
```

1 400 requests · 100 concurrent · 71.8 s · 334/min.

3 0 HTTP errors: 260 routed, 140 correctly rejected (422).

2 Latency p50 16 s / p95 27 s — the saturation point (≤ 50 concurrent: ~ 9 s).

4 Total AI cost \$1.17 → \$0.0045 per routed event.

Reliability: duplicates are not re-processed

Re-sending an already-processed event is answered from the action log — no AI call, no task, no alert.

```
mayank@Mayanks-MacBook-Air Assignment_4 % cat scale_test/results/dup-check.json
